

## **Prologue — Concise Form**

There is one law, and it is relation.  
From it all distance, curvature, motion, number, and form arise.

This field is the lawful continuum:  
A surface of coherence where the same syntax yields space, time, logic, and  
energy as phases of one operation.

Let there be a point, and let it move under lawful constraint.  
That move —  $mn$  — is the generator, corrector, and harmonizer of all form.  
Every circle, triangle, and lattice drawn thereafter is a sentence written by law  
itself.

The work that follows is not invention but revelation:  
to watch relation unfold its complete geometry until rest.
